# Much more than access control

Open doors, gates and elevators with your phone. Mobile app, guest QR codes and a management panel - one system for all your access needs

**Doors • Gates • Elevators • Parking • QR Code • [qrnsystems.com](https://qrnsystems.com)**

**From the gate to the parking area and elevator.**  
The same access logic across the entire property.

## Full platform flexibility

A modern access control system for buildings, residential developments and commercial properties. Manage doors, gates, elevators and parking from one place, while easily granting access to residents, employees and guests.

### Doors entrances and apartments

Open doors using your phone or a QR code, with individual access permissions for selected entrances.

### Gates and barriers

Conveniently open entrance gates and parking barriers from the app, also using Bluetooth.

### QRN Lift Elevators

Call the elevator and automatically select your floor. Access is limited to assigned areas only.

### Parking Access zones

Assign access to specific parking areas, sectors and zones for residents, employees or tenants.

### Guests QR code

Generate temporary QR codes for guests, couriers or service staff without handing over keys, remotes or permanent access.

Mobile app, management panel and BLE access points  
**one platform for a modern development.**

One system  
Many possibilities.

From the gate to the parking area and elevator.  
The same access logic across the entire property.

## Open it the way that's most convenient for you.

### Tap from the access list

Only authorized gates, doors and elevators — with active, scheduled or expired access status.

### Open automatically when nearby

BLE detects your phone within range and unlocks access without searching for a card.

### QR code for guests

Set the time period, access zones and individual ID — send via WhatsApp or e-mail and revoke access instantly.

### Get started via SMS

Phone number + OTP — no passwords, with immediate access to your permissions.

Mobile app, management panel and BLE access points  
**one platform for a modern development.**

### No cards or remotes

Your phone replaces the key fob. Open access within BLE range — with a tap or automatically when you approach.

### Guests without the hassle

Temporary QR access for up to 7 days, with selected zones encoded in the QR. Revoke access with one click and manage everything from the panel.

### Operational control

Rules, roles, event logs and validity periods. Investors and property managers can see who enters and when.

### Built to scale

Add more buildings, entrances and elevators within the same system — without changing the app for residents.
